

■ Git Command Cheat Sheet

Quick reference for everyday Git & GitHub workflows

■ Setup & Config

```
git config --global user.name "Name"
git config --global user.email "you@example.com"
git config --list
```

■ Repository Setup

```
git init
git clone
```

■ Basic Workflow

```
git status
git add
git add .
git commit -m "message"
git log
git log --oneline
```

■ Branching

```
git branch
git branch
git checkout
git checkout -b
git switch
git switch -c
git merge
git branch -d
```

■ Remote Repositories

```
git remote -v
git remote add origin
git push -u origin main
git push
git pull
git fetch
```

■ Inspect Changes

```
git diff
git diff --staged
git show
```

■ Undo & Reset

```
git restore
git restore --staged
# Keeps changes staged
git reset --soft HEAD~1
# Unstages changes
git reset --mixed HEAD~1
# ■ Discards all changes
git reset --hard HEAD~1
git revert
```

■ Stashing

```
git stash
git stash list
git stash apply
git stash pop
git stash drop
```

■ Tagging

```
git tag
git tag v1.0
git push origin v1.0
```

■ Rebase

```
git rebase main
# Interactive rebase last 3
git rebase -i HEAD~3
```

■ Merge Conflicts

```
git status
# Fix files manually, then:
git add
git commit
```

■ Logs & History

```
git log --oneline --graph --all
git blame
```

■ Cleanup

```
git clean -fd
git gc
```

■ Handy Shortcuts

```
# Stage & commit tracked files
git commit -am "message"
# Switch to previous branch
git checkout -
git pull --rebase
```

■ Danger Zone

```
# ■ Irreversible - be careful!
git reset --hard HEAD
git clean -fd
```

■ Quick Tips

- Commit often with meaningful messages
- Use branches for every feature / fix
- Prefer rebase for a cleaner linear history
- Avoid --hard reset unless you're certain
- Use .gitignore to exclude build artifacts
